The specification describes a long terminal repeat (LTR)-RU5 region which encodes the expression of a MSRV-1 protein. This is unusual for LTRs, in particular in the RU5 region. The sequence includes CAAT and TATA signals which are present in the U sequence includes CAAT and TATA signals which are present in the U sequence Probes and are not directed towards the CDS indicated in the Geatures table. Probes and antibodies to the MSRV-1 retrovirus protein and encoding polynucleotide sequences are used to detect the presence of MSRV-1 retrovirus in a biological

                                                                                              The present sequence encodes an envelope protein of MSRV-1. The envelope protein expressed by the endogenous human retrovirus MRSV-1 has superantigen activity associated with autoimmune disease. The protien can be detected using the method of the invention. The specification describes a process for detecting activity of a superantigen in a biological sample. The process comprises identifying large scale expansion or loss of lymphocytes that carry at least one of the Vbetal6 and/or Vbetal7 determinants. The method is used to screen for agents that inhibit the superantigen, especially those associated with MRSV-1 which is implicated in autoimmune disease, particularly multiple sclerosis. These agents are potentially useful for treatment or prevention (e.g. as vaccines) of autoimmune diseases.
                                                                                                                                                                                                                                                                                Detecting

Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activiny/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for gene therapy.

                                                                                                     treating, preventing or ameliorating medical conditions in humans and animals. Detection of the levels of the proteins can be used for the diagnosis of e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity (e.g. in feeds), cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopolesis regulating activity, tissue growth activity, activin/habibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotide sequences are also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                      This is the human secreted protein AJ172_2 nucleotide sequence, obtained from a human adult testes cDNA library. The invention relates to secreted human and murine proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for

New human retrovirus HERV-W ENV proteins/peptides having superantigen activity useful for diagnosing and treating multiple sclerosis -

Claim 13; Fig 10; 94pp; English.

On the basis of the PBS t-RNA motif used for the classification of human CC endogenous retrovirus (HERV9) the full length endogenous provirus which CC was been located on the long arm of human chromosome 7 (7921-22) has been CC designated HERV-W. The present invention describes proteins or peptides (I) having superantigen (SAq) activity comprising the ENV protein (ENV) CC of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I) CC have neuroprotective activity, and can be used in: vaccines; antisense-cc useful for diagnosing multiple Sclerosis (MS) or HERV-W-associated CC with MS, substances capable of binding to a retroviral superantigen associated cc with MS, substances capable of blocking transcription or translation of HERV-W retroviral SQG against HERV-W retroviral SQG is useful in therapy. Mucleic acid copable of blocking transcription or translation of HERV-W retroviral SQG is useful in therapy. Nucleic acid copable of blocking SAg activity, capable of binding to a retroviral SQG capable of blocking SAg activity, capable of binding to retroviral SQG is useful in therapy. Nucleic acid copable of blocking SAg activity, capable of binding to a retroviral CC capable of blocking SAg activity, capable of binding to a retroviral CC capable of blocking SAg activity, capable of binding to a retroviral CC capable of blocking SAg activity, capable of binding to a retroviral CC capable of blocking SAg activity, capable of binding to a retroviral CC capable of blocking SAg activity, capable of binding to a retroviral cord copactivity, capable of binding to a retroviral cord capable of blocking transcription or capable of binding to a retroviral cord capable of binding to a retroviral capable of binding to a retroviral capable of binding to a retroviral capable of b

The present sequence encodes a human endogenous retrovirus envelope protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope polypeptides and polynucleotides are used to produce therapeutic or prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of other types of syncytia), and to promote adhesion of cells

                                                                                                                                                                                                                                                                   The present sequence represents an endogenetic retrovirus, which is associated with an autoimmune disease, and is integrated into the humar genome. The retrovirus is human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. HERV-W nucleic acid fragments, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell proliferation in vitro.

under pasts of the PBS t-RNA motif used for the classification of human endogenous retrovirus (HERVs) the full length endogenous provirus which was been located on the long arm of human chromosome 7 (7921-22) has been designated HERV-W. The present invention describes proteins or positive (I) having superantique (SAC) positions or positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Key

```
of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I) have neuroprotective activity, and can be used in: vaccines; antisense-ct therapy; and HERV-W SAg activity-inhibitors. (I) and encoding DNA/RNA are useful for diagnosing multiple scherosis (MS) or HERV-W-associated CC disorders. (I) are also useful for identifying substances (and optionally recovering) capable of binding to a retroviral superantigen associated CC with MS, substances capable of blocking SAg activity and substances capable of blocking SAg activity and substances compable of blocking SAg activity and substances codevoid of SAg activity and substances codevoid of SAg activity and substances codevoid of SAg activity and specific derived from (I), modified to be consist HERV-W retroviral SAg is useful in therapy. Nucleic acid completes encoding (I) are useful as vaccines against MS. Substances capable of blocking SAg activity, capable of binding to a retroviral superantigen associated with MS, or capable of blocking transcription or translation of MS. (I) and nucleic acids encoding them are useful for the treatment and companies of MS. (I) and nucleic acids encoding them are useful for constances codes of specifically claimed envelope protein of HERV-W designated G.

                                                                                                                         This sequence represents clone cl.PH74 of the human endogenous retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulindependent diabetes and related pathologies) and of abnormal or unsuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes
                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                       New nucleic acid sequences from human endogenous retrovirus-W expressed exclusively in placenta and useful in diagnosis and therapy of autoimmune disease, and abnormal or failed pregnance.
                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                         Beseme

The fragment is originally derived from a novel retrovirus, human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autolimnune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for diagnosts of autolimnune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell proliferation in vitro.

The invention relates to a spatially-addressable set of single exon cc nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting ct the probes with a collection of detectably labelled nucleic acids cound to each probe of the microarray. The probes are useful for cc verifying the expression of regions of genomic DNA predicted to cc encode proteins. They are useful for gene discovery, and for cc determining predisposition and/or prognosing breast disease. Gene cc expression analysis is useful for assessing the toxicity of chemical cc diversity of probes for measuring gene expression, with far less bias ct than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The C contest sequence is a single exon nucleic acid probe of the invention. Cc present sequence is a single exon nucleic acid probe of the invention. Cc printed specification, but was obtained in electronic format directly crown with part of the contest of the microarray contest of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       04-FEB-2000;

                                                                                                                                             measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

RS Grafam, D.

RS Direct Submission
AL Submitted (19-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire,
CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk
On Sep 19, 2000 this sequence version replaced gi:9944073.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT: Tr: TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further infor http://www.sanger.ac. Further information rmation can | .uk/HGP/ChrX be at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IMPORTANT: This sequence is not the entire insert of clone RP13-383K5 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP13-383K5 is at 1 in this sequence. The true left end of clone RP5-1126E12 is at 162480 in this sequence. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. RP13-383K5 is from the library RPCI-13.2 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             //www.chori.org/bacpac/home.htm

It currently consists of 33 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
